Organization**

Data Ecosystems for Unlocking Impact-Focused Decision-Making for Sustainable Development: A WHO Perspective

Dr. Pavel Ursu, Director, Delivery for Impact, WHO HQ, Geneva

Doha Data Forum | 30 October 2023

The world is off track to reach most of the triple billion targets and the SDGs

Example of health-related SDGs progress projections by indicator

Billion	Triple Billion Indicator	2030 Target	Progress Status
HPOP	Safely Managed Water	96	Red
HPOP	Childhood Wasting	3	Red
HPOP	Trans Fat Policy	100	Red
HPOP	Suicide Mortality	6	Red
HPOP	Childhood Stunting	17	Red
HPOP	Road Deaths	9	Red
HPOP	Mean Particulates (PM 2.5)	5	Red
HPOP	Childhood Overweight	3	Red
HPOP	Intimate Partner Violence (F)	0	Red
HPOP	Tobacco Use	18	Red
HPOP	Safely Managed Sanitation	95	Red
HPOP	Clean Household Fuels	96	Red
HPOP	Violence Against Children	0	Red
HPOP	Adolescent/ Child Obesity	5	Red
HPOP	Alcohol Consumption	5	Red
HPOP	Adult Obesity	11	Red
UHC	Tobacco control	20	Green
UHC	Water and sanitation	96	Red
UHC	TB treatment	91	Yellow
UHC	Child treatment	85	Yellow
UHC	Malaria prevention	80	Yellow
UHC	Management of diabetes	8	Red
UHC	Family planning	75	Green
UHC	Child immunization	93	Yellow
UHC	Cardiovascular Disease	80	Red
UHC	Hospital access	34	Yellow
UHC	HIV treatment	92	Yellow
UHC	Pregnancy and delivery care	95	Red
HEP	Health security	80	Green

■ Likely Achieve by 2030
■ Won't Achieve by 2030
■ Won't Achieve by 2030, but within 10% of the target

Achieving the Triple Billion targets is about meeting the Sustainable Development Goals

The Triple Billion indices use a sub-set of 46 outcome indicators. These include **39 SDG indicators** and seven Member State-approved indicators covering a range of key health topics.

SUPPORT

- Track progress
- Identify gaps
- Problem-solve
- Achieve impact

Data
a global good

Country focus

Delivering measurable impact

Technical Products:

- Data standards
- Data collection and reporting
- Data management and governance
- Modelling and forecasting

- Tools
- Technical support and specialized assistance
- Networks and partnerships

- Data-driven acceleration
- Effective implementation
- Mainstreamed Delivery approach

How it helps:

- Improved interoperability
- Equitable and secure data access
- High quality and timely data visualizations

- Stronger health information systems
- Improved data quality and availability
- Informed decision-making and policy design

- Data capacity and community
- Accelerated progress towards global goals/improving health outcomes
- Accountability for results

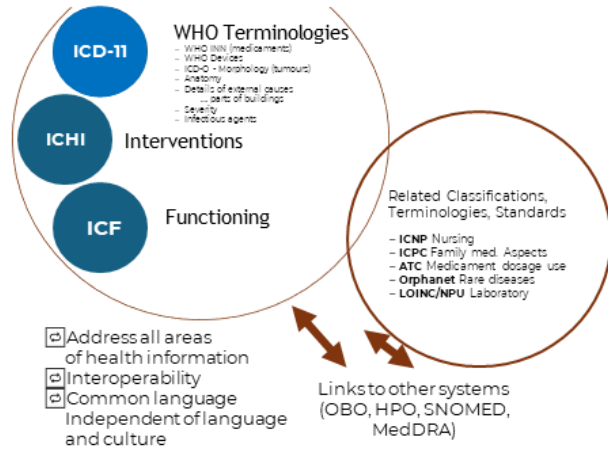

Supporting countries to drive measurable impact in countries

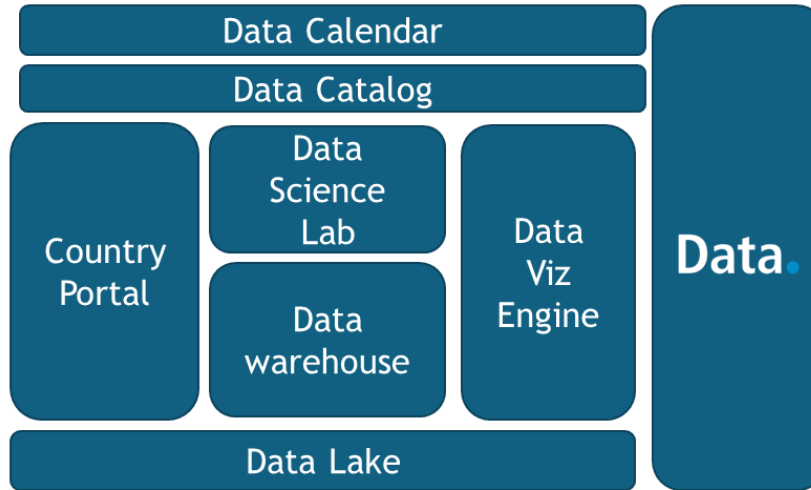

Data is the fuel that powers progress across all the SDGs

Data.

International Classification of Diseases 11th Revision

The global standard for diagnostic health information

Triple Billion Progress

Worldwide, 1.26 Billion [0.96 - 1.49 B] more people are expected to be enjoying better health and wellbeing by 2030 compared to 2018. But this is still insufficient to reach SDG targets.

477 Million [433 - 523 M] more people are expected to be covered by essential health services and not experiencing financial hardship by 2030 compared to 2018. However, efforts need to be re-doubled to achieve the UHC target.

690 Million [591 - 784 M] more people are expected to be protected from health emergencies by 2030 compared to 2018. But more needs to be done to ensure everyone is protected.

Estimates are calculated with 90% uncertainty intervals (UI) and presented as the upper and lower bounds in the closed brackets after the mean estimate.

Monitoring population health trends

The world is off track to achieve HRSDG indicators in countries and by region; data gaps persistent

■ Likely Achieve by 2030
■ Won't Achieve by 2030
■ Won't Achieve by 2030, but within 10% of target

* Preliminary results based on World Health Statistics 2023, and subject to changes based on the upcoming Member States consultation.

Data ecosystem - driving health impact

Rwanda's Health Information System:

leveraging electronic health records, mobile health data collection, and real-time reporting

Monitoring disease outbreaks, track health indicators, allocate resources effectively, rapid response to health crises, such as the COVID-19 pandemic, improved overall service delivery

Singapore's Smart City Initiatives:

Data is central to urban planning and management, city-state collects data from various sensors and devices throughout the city.

Led to: optimized transportation systems, reduced energy consumption, and enhanced public services, making the city more sustainable and efficient

Norway's Electric Vehicle Adoption

Data ecosystems to incentivize EV purchases, monitor charging infrastructure, and analyze environmental impacts

Substantial decrease in greenhouse gas emissions from the transportation sector, leader in sustainable mobility

Sweden's Waste Management

Rely on data ecosystems to track and optimize waste collection and recycling efforts

High recycling rates and efficient waste-to-energy processes, reduced landfill waste, conserved resources, generated clean energy

Focus: Urgent action needed to accelerate progress

- **Delivery for Impact**, as part of its transformation led by the Director General, with leadership across 3 levels emphasizing translating data, science, and evidence into tangible results in countries.
- We support the three levels of the Organization in accelerating progress towards health-related SDGs targets
- Assist Member States in strengthening their capability to better deliver on these targets and improve health outcomes at country level
- In complement with other streams supporting acceleration: partnerships, digital solutions, innovations

Delivery stocktakes hosted by DG to regularly report progress on the triple billion targets SDGs

	A	B	C	D	E	Policy package
	Acceleration scenarios	Budget and investments	Countries identified for acceleration	Delivery Plans and solutions	Execution, tracking and problem-solving	
Universal Health Coverage Support the 16 countries most disrupted by COVID-19 to get back on track for the End TB Strategy targets by 2025. (Tuberculosis treatment coverage)	On track	In progress	On track	In progress	On track	Implementing the End TB strategy
Health Emergencies Protection Increase preparedness for emergencies in all countries, as measured through IHR States Parties self-assessment annual reporting (Prepare)	On track	In progress	On track	On track	On track	NAPHS for all: a 3 step strategic framework for national action plan for health security
Healthier Populations Strengthen tobacco control policies, at the highest level, in at least 18 countries, to reduce tobacco use (Tobacco use)	On track	In progress	On track	On track	On track	MPOWER Technical Package
Stop the rise in obesity rates in 24 high-burden countries through the Obesity Accelerated Action Plan by 2025. (Obesity and overweight)	On track	In progress	On track	On track	On track	NCD Best-buys and other recommended interventions
Further reduce the alcohol consumption by 20% in 20 priority countries by 2025 (Alcohol)	On track	In progress	On track	On track	On track	SAFER Technical Package

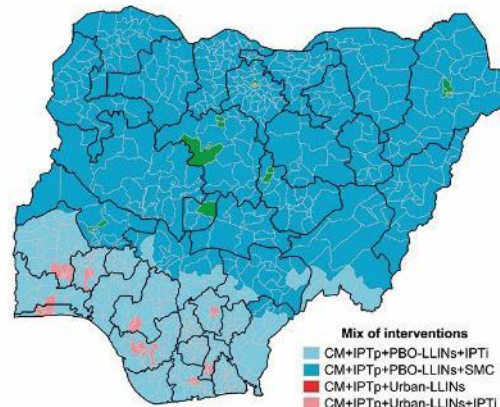

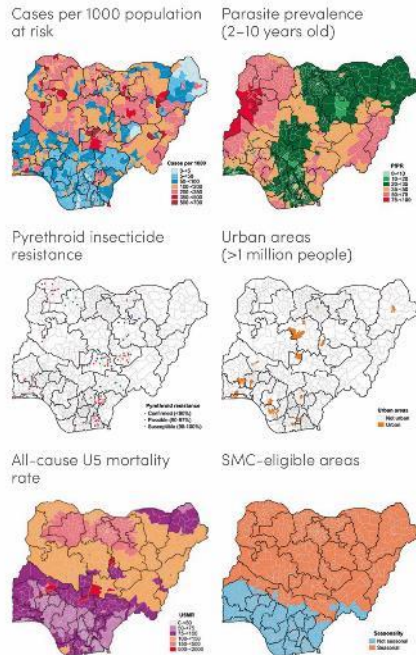

Legend: ● In progress ● On track

Nigeria - Subnational planning enables tailoring of interventions, with a projected 40% reduction in malaria prevalence by 2023

Analysis of regional variation in disease profile, risks and health systems in Nigeria...

...informed a sub nationally-tailored plan that drives efficiency and equity...

... and will reduce prevalence of malaria by 40% by 2023 if delivered

Mix of interventions

The Delivery Dashboard for Nepal

The delivery end to end planning process identifies priorities and targets, and is consistently applied across workstreams. Using the ABCDE approach brings a sustained focus on achieving impact, when used as a routine tracking mechanism updated quarterly.

Following the 100 days Challenge, priorities selected with Nepal country office are being implemented, and tracked in this delivery dashboard.

IHR core capacity score has significant room for acceleration compared to Global and Regional averages in Nepal

Public health emergency preparedness and response, as well as strengthening IHR core capacities, should remain a priority in the national health agenda.

An increase by 39% is needed to match the regional average by 2025.

The IHR core capacity average score has significantly improved from 23% in 2018 to 47% in 2022.

What is the SDG3 GAP?

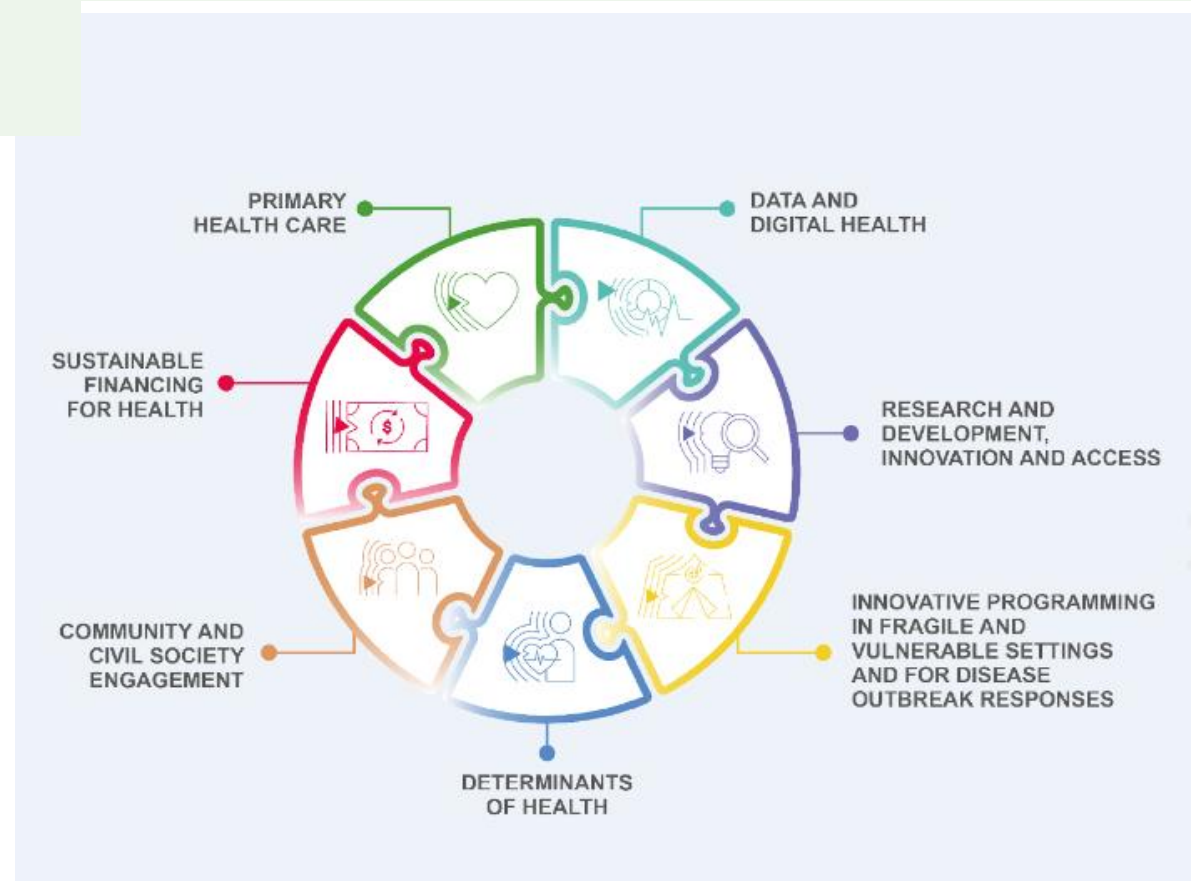

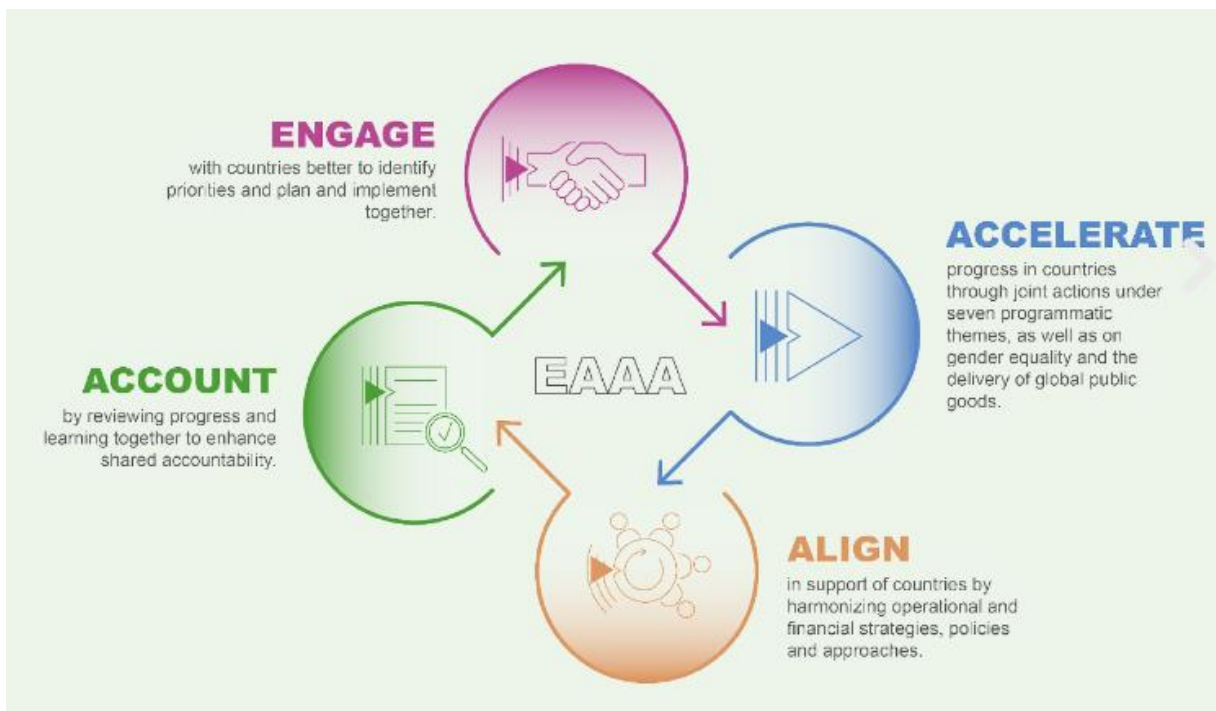

“Collaboration is the path, impact is the destination.”

©WHO

Signatory agencies of the Global Action Plan for Healthy Lives and Well-being for All (SDG3 GAP)

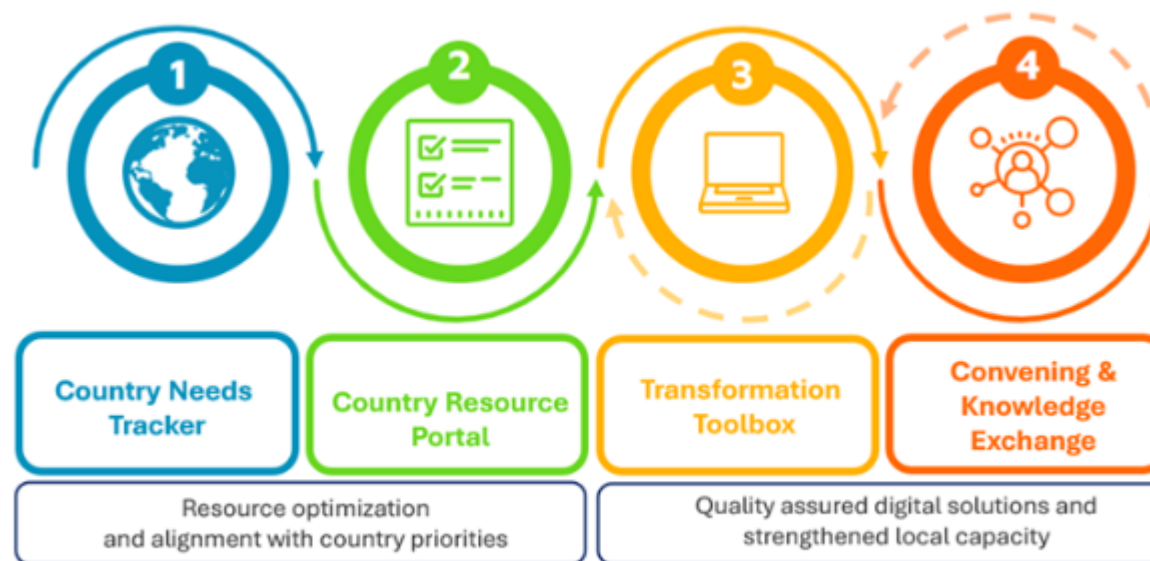

Support provided by the agencies is based on country priorities and brings together those agencies that add the most value in the areas identified.

| Global Initiative on Digital Health (GIDH)

- WHO managed network of stakeholders - to facilitate the implementation of the Global Strategy on Digital Health 2020-2025
- A platform to enable a wide global ecosystem to work collectively to promote country capacity and strengthen international cooperation in digital health

WHO Innovation Hub - Solve bottlenecks, accelerate impact, and improve health, focusing on the most neglected problems and people

Examples of innovation from across the globe

Drones fight malaria in Tanzania

Regional Office for Africa

Telehealth enabled container clinics in Uganda

Regional Office for Africa

Medical booking platform for low income households in Ivory Coast

Regional Office for Africa

Empowering community health agents through the use of ICTs in Peru

Eco-health approach to fight Chagas disease in Guatemala

Regional Office for the Americas

Indigenous health agents professionalisation

Regional Office for the Americas

Simply collecting the numbers is not enough

- *Fulfilling the potential of data to drive progress requires analysts and decision-makers with the knowledge and skills to extract useful information from it and to act on it*
- There are only six goals for which more than two thirds of countries have data
- only 19% of the gender-specific SDG indicators are widely available.
- An estimated 230 million children worldwide are unregistered.
- Four in 10 of the world's deaths are not registered.
- New financing instruments: the Global Data Facility and the Complex Risk Analytics Fund
- Rally the global community in raising US\$500 million over 10 years for greater scale, insight, and impact from data with purpose
- Significant increases in domestic resource mobilization for data are also urgently needed

| **UN development system - 12 high impact initiatives which provide a platform to help take SDG progress to scale**

The Power of Data High Impact Initiative builds on recommendations from the Secretary General's 2023 SDG Progress Report

- Fully using the power of data and unlocking the data dividend for the SDGs will require both political leadership and financial commitments
- Investments in data pay an average "dividend" of \$32 for every \$1 invested
- This High Impact Initiative will strengthen both the national and global enabling environments for developing data systems.
- **Demonstrating progress through raising the percentage of available SDG data in countries to ninety per cent by 2027.**

A robust data ecosystem - key to accelerating the SDGs and post-SDG sustainable development

not just a tool

- Data Transformation for Actionable Insights
- Relevance Across Critical Areas of Development
- Informed Decision-Making for MSs and WHO/UN
- Enhanced Collaboration, SDGs3 GAP, GIDH, Innovations
- Data-Driven Problem Solving, Delivery for Impact
