Targeted Interventions

Several statistical reports are periodically published internally for use by management, the operations complex and other users as a guide for:

- (1) Targeting intervention to the most important projects in member countries
- (2) Understanding the portfolio performance in order to make informed decisions and facilitate country level dialogue
- (3) Evaluating the impact of its intervention in member countries
- (4) Monitoring the progress in achieving SDGs

Key Challenges

Partnering for impact

(i) Technical research, (ii) Building country capacity & (iii) Knowledge sharing and exchange. Working in common member countries on: - National Accounts, - Statistical Business Register (SBR), - Input-Output (I/O) tables, - Global Value Chain (GVC) analysis

In Senegal

- o Strengthened institutional capacity to use non-traditional data sources (e.g., Earth observation data using ARDC) to understand deforestation, insights into water quality, identify the characteristics of areas being used for agricultural activity, etc.
- o Transferred satellite data production and analytical capacity
- Reduce decision time from months to days when ARDC and Earth observation (EO) are used agricultural surveys

In Togo

Support to improve environmental data for monitoring and achieving the Sustainable Development Goals.

Collaborate in joint statistical activities to support strengthening the statistical capacity of member countries in Western Asia

IsDBI-Oxford Poverty and Human Development Initiative (OPHI) prepare series of Briefs which explore different dimensions related to multidimensional poverty in IsDB Member Countries using data from the global Multidimensional Poverty Index.

Global Reporting

Concluding Remarks

IsDB Group makes use of data produced by national statistical authorities as well as data from recognized international sources to inform its decisions.

It is therefore imperative to strengthen the capacity of national statistical offices and other data producers in the National Statistical Systems to make available the required data to monitor and report on the progress of national development objectives and global initiatives such as the SDGs.

New data sources, tools and methods can help improve the timeliness, coverage, and quality of development data through collaboration, partnerships and knowledge sharing.

Thank you Merci شکرا
